Why am I getting these messages? What can I do? Should I contact technical support? SN Stopwatch Description SN Stopwatch is a small software application developed

specifically for helping you make use of a stopwatch to track the time spent on different projects or other activities. In order to run the program correctly and avoid bumping into all sorts of errors, you need to deploy Microsoft.NET Framework 4 on the target computer. Straightforward interface You only need to go through a fast

installation process in order to gain access to the GUI. The tool boasts a clean and simple layout that allows you to get an idea about how to tweak the dedicated parameters in no time. An online help manual is available in case you need extra assistance with the configuration process. Work with a stopwatch SN Stopwatch offers you the

possibility to start, stop, or reset the stopwatch, and view the time revealed in the main window. The time is expressed in hours, minutes, seconds, and milliseconds. What's more, you are allowed to record multiple time laps directly in the primary panel and clear the captured laps with a single click. Other important configuration

settings worth being mentioned enable you to keep the timer on top of other windows, save the lap results to plain text file format (provided that you specify the filename and output location), as well as make the application display the total time in milliseconds, seconds, minutes, hours, or days with the aid of a secondary

timer. Tests have pointed out that SN Stopwatch carries out a task quickly and without errors. It remains light on system resources so the overall performance of the computer is not affected. Short description of the program. Aviso is a software designed to find

and highlight duplicated files on your computer. You just need to select the files you want to check, click the button to start the process, and you will get a full report of your target files in no time. The program can work in real time, so it will not waste your time. Besides, it has been optimized to be launched on as many

computers as possible, without any problems in the operation. The next feature to introduce is that Aviso supports regular expressions. This means you are able to employ any imaginable search pattern in order to search for your target files. This feature can come in handy in case you want to find copies of images or documents with a

particular file format. Another important aspect of the software is that it comes with a database that stores all the files it has previously searched for. What's more, if you want to open the results window by the side of your current activity, you can do so just by clicking on the empty space on the tool bar. Yet, the program also comes

with a built-in file compresor, so you don't need to get too much worried about the fact that you might have so many files that you can't see them all in the report. Aviso can help you find and make you aware of file duplicates on your computer. The program is easy to use, and you are offered with a lot of features to simplify the

process. Freemake DVD Copy is a simple and fast freeware application designed to copy your DVD-Video content to hard drive and other media.
