Encryption is nowadays a must-have for protecting sensitive data. For this reason, it is not surprising that countless of applications offer encryption as a main function. However, each one of them has its own pros and cons which make them appeal to only some specific target market. While some of them may not cost you any money, they have a bloated feature set and have got nothing else in particular besides an ugly interface. But what if we tell you that there is a completely free encryption utility that actually lives up to the standard of its name and offers a really impressive set of features? I'm talking about Silver Key Free Edition. It is a powerful and user-friendly application for encrypting files and folders. It allows you to create digital signatures, encrypt passwords, digital certificates, hide your favorite music files or documents, etc. The program is extremely easy to use. Just one click and you are ready to go. The interface is beautiful, simple and extremely clear. Silver Key Free Edition offers you three different encryption methods: you can use a self-extracting file to encrypt your sensitive data, you can generate a standard encryption parcel that you can decode using only the program, and you can also generate an attachment parcel, which allows you to hide sensitive data into innocent looking files. A digital signature, an encryption password and a certificate for each file or folder can be used in conjunction with the various types of cyphered containers. The algorithm is available in many operating systems, including Linux, Windows, Mac OS, etc. Intuitive and easy to use interface Security experts and programmers around the world use AES. In its original version, AES provides 112 bit security. However, the Advanced Encryption Standard (AES) was revised in 2001 to a 128-bit key size, which increased its security. AES also includes a set of very useful features that programmers and experts use every day. It's convenient to import
