When asked about his most favorite piece of software, Bill Gates has said that "it's not a good idea to have too many favorites". If asked to name a personal favorite application, Bill Gates said "I have hundreds of them". Possibly because he is one of the most influential people on this planet, it is practically impossible to point out one favorite application. However, one favorite application in particular stands out. It's the text editor built into Microsoft Windows, which has evolved into a de facto standard. It provides an easy to use, easy to learn, and completely free solution for editing text. The leading data format on this planet is text. People use it for chats, emails, websites, social media, news, and more. Microsoft Windows represents the most common data format on this planet. It's well suited for quick and easy data entry in any number of fields. That's why it's the default text editor for Windows, with all new releases coming with it by default. In fact, it has become a de facto standard, which is why everyone else provides a way to access it: text editors and other text tools. Microsoft Windows has become the de facto standard for text editing. But it is not the only one. It's always possible to find an alternative text editor for Windows. But text editors are not all the same. Some of them have special features that you won't find in the native Microsoft Windows text editor. And some of them are native replacements for the standard text editor, allowing you to customize it to your needs. The leading data format on this planet is text. It's the leading one on Windows, and it's the leading one on the Internet. It has even become a de facto standard for the most popular web browsers. But it's not the only one. Firefox is a different solution. It has its own web text editor, and it's used for editing web content, and not the standard text. Microsoft Windows is also not the only one. Mac OS X is a different solution, providing its own text editor, as well. Windows is used for editing text, but it's also used for a number of other things: code, documents, presentations, videos, music, and more. Some editors are designed
